

Dear FCC, Thank you for aiding the development of Low Power FM radio please continue and redouble your efforts in this realm. I look forward to the day that there is a community based low power station in my rural community of Celo NC however until that day it would be almost as good if WPVM were able to place a translator that would allow our community to hear local community based radio. Please know that I support translators for low power community based FM stations. Finally I have tried to listen to WPVM in Asheville when I am there and I have been very frustrated that interference from WIMZ of Knoxville. Please make my local community station the priority in my community. It seems that the elimination of the third adjacent channel provision will ease this interference issue and I support such an action. Thank you Patryk Battle
